Salesforce Backup
Managed Backup for Salesforce Data & Metadata

Sky Data Vault's fully managed Salesforce Backup protects your Salesforce data, metadata, and files with automated backups, granular recovery, and immutable storage.

This service is designed for organizations that need reliable protection without managing backup infrastructure.

Sky Data Vault's Salesforce Backup provides comprehensive protection for the core Salesforce platform, including data, metadata, and files.

Organizations benefit from automated backups, quick restore options, and a fully managed service model that offloads day-to-day backup administration to SDV.

FEATURE/CAPABILITY	INCLUDED
Backup for Salesforce standard & custom objects	✓
Metadata backup (most types)	✓
File & attachment protection (ContentVersion-based)	✓
Granular record & field restore	✓
Hierarchy-aware restores (parent/child relationships)	✓
Point-in-time restore options	✓
Sandbox seeding support	✓
Support for AppExchange app objects (API-accessible)	✓
Immutable backup storage	✓
Fully managed by Sky Data Vault (monitoring & support)	✓

Benefits of Backing Up Microsoft Entra ID through Sky Data Vault

Entra ID (formerly Azure AD) is the identity fabric for your Salesforce, Azure, and other apps, as well as for access. If identity is lost, corrupted, and/or misconfigured, users lose access, apps fail, and security collapses. This leaves organizations open to a wide range of security and compliance risks.

While some believe the native "recycle bin" or soft delete in Entra ID provides adequate recovery, it actually offers only approximately 30 days of retention and limited ability to restore complex objects (roles, app registrations, conditional access policies).

Organizations are looking for options to provide granular restore capabilities (users, groups, apps, service principals), long-term retention, audit trails, ransomware/insider threat protection, and business continuity for identity.

SDV Microsoft Entra ID Backup Provides

Automation
Automates scheduled frequent backups of Entra ID tenants, including users, groups, service principals, application registrations, conditional access policies, audit & sign-in logs.

Recovery
Enables granular recovery of specific objects (or attributes) rather than full-tenant rollback, making data restoration quick and efficient.

Compliance
Supports long-term retention beyond native recycle bin windows, enabling compliance (GDPR, HIPAA, etc.) and operational readiness.

Protection
Protects against insider threats, large-scale identity compromise, accidental deletion, and policy misconfiguration.

Unified Solution
Combined with SDV's Salesforce backup, you get a unified solution: both your data and identity are protected, which means fewer gaps.

US-Based Support
SDV's 24x7x365 US-based support for the monitoring, managing, and maintaining of the services, along with recovery support.

Your identity platform deserves the same level of protection as the data it secures. Connect with us today to see how easy it is to close your Entra ID recovery gaps.
